

Little Book

Book 3: *The Life Cycle of a Butterfly*

Directions for a Shape Pop Up Book

Cut out the butterfly shape. Use it as a template to make the butterfly-shaped book cover shown below.

Lay it over a folded sheet of yellow construction paper. Place the butterfly template next to the folded edge and cut around the butterfly to make a book-cover-like silhouette of an butterfly (do not cut apart the opposed silhouettes).

Fan-fold the Life cycle-of-the-butterfly picture-sequence on the next page.

Glue the first picture, "egg," to the inside front cover of the butterfly book cover, as shown below; glue the last picture, "butterfly," to the inside of the back of the cover.

Do not glue the two center pictures, "caterpillar" and "chrysalis" to the cover.

The Life Cycle, which is represented in the butterfly pictures, will pop-up when the children open the book.

The Butterfly book will help children learn about life cycles. As they read the book they will see the change that happens during the growing process.
